Identifying spare parts

In order to keep the processing time for your spare parts request as short as possible, we need your cooperation in identifying the components.

The following is a description of the process chain for identifying components based on diagram, technical assembly drawings and parts lists.

Alternatively: send us a detailed description of the fault with pictures of the affected components so that our After Sales Team can offer you the suitable spare parts.

We require the following for the machine with commission no..: x.xxxx / project number.: P100xxx the following spare part:

Item no..: 0029323

Quantity:

Designation: O-ring 085x05 FPM70 Viton/black

Drawing position: 6.10 - 28

Send your spare parts request as described above to spareparts@hedrich.com

The After Sales Team will take care of your request.

Step 1:

Find the commission number/project number*, diagram, and parts lists in the operating manual for your machine.

*Alternatively, please send us a picture of the nameplate.

This is normally located on the main control cabinet (see example below):

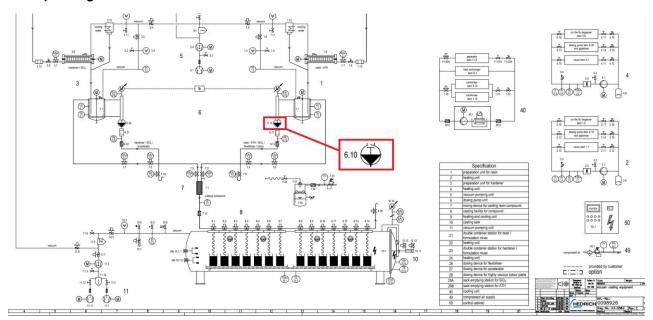

Step 2:

Once the machine has been identified, you must identify the affected component.

2.1 Identify by diagram and parts lists.

Identify the assembly in which the required item is installed so that you can then specify it in the parts list.

Example diagram:

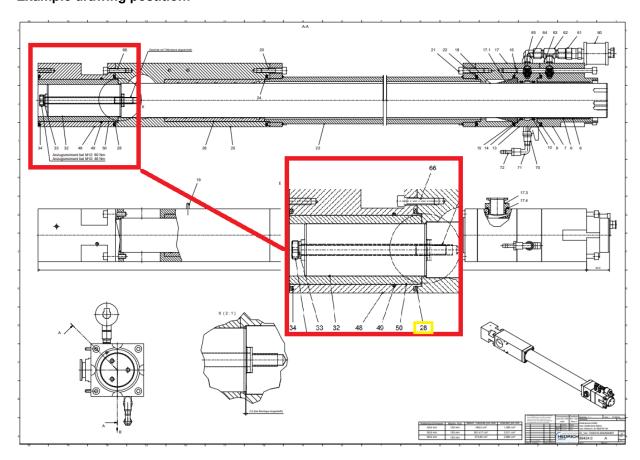

Example parts list:

| Designation: vacuum casting equipment, assembly group 6 | | ation: | Drawing: Weight (kg): | | | | | | | | | | |

2.3 Identification by nameplate

Subassemblies and purchased parts usually have their own nameplates with serial numbers and manufacturing numbers for the assemblies (see examples below).

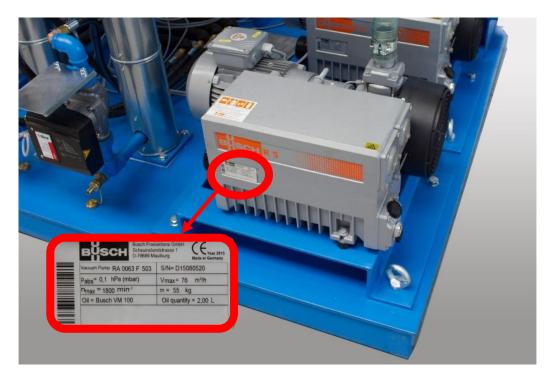

Please also send us all the information on these plates or a picture of the nameplate.

When inquiring about vacuum pumps (replacement pump/sealing kit/bearing kit), always include the nameplate!

Example: Rotary piston vacuum pump consisting of pump and drive

Example: Rotary vane vacuum pump

Example: HEDRICH vacuum mixer

Example: Hedrich dosing pump
