

PRESS RELEASE

Ehringshausen, April 03, 2019

The HEDRICH Group to Participate in Four Separate Fairs/Exhibitions in May

In terms of fairs and exhibitions, 2019 has already started for HEDRICH in March with the *Middle East Electricity* in Dubai, but it is going to become really busy for us in April: seeing us spurting down under preparations for a total of 4 fairs taking place coincidentally in May; plus a *symposium* at the Technical Academy in Esslingen.

This year, the subject of E-Mobility will be of extraordinary importance and our focus and main topic for the first two events.

Employing an optimized vacuum casting process for e-motor components, HEDRICH has developed a new production technology to perfectly fix and electrically insulate windings and at the same time considerably increase heat dissipation.

HEDRICH will be exhibiting both on the *Electric & Hybrid Vehicle Technology Expo Europe* in Stuttgart as well as the *PCIM* in Nuremberg from May 7, to 9, 2019, referring to the subject of E-Mobility.

On May 20, to 23, 2019, you can visit us at the *AWEA Windpower* in Houston, USA.

First priority feature of this exhibition will be the wind energy market that HEDRICH has already topped the mark successfully in by establishing its vacuum infusion process for the manufacturing of rotor blades.

Likewise on May 21, to 23, 2019 you can find us contributing to the leading fair for the electrical industry - the *CWIEME* in Berlin. Besides the usual key subjects of cast resin and oil/paper applications, this exhibition will specifically refer to the new market of E-Mobility.

Printing free of charge. A receipt would be appreciated.

HEDRICH Group

The HEDRICH Group is a worldwide leading vacuum equipment engineering company specialized in the development, design, assembly and testing of customized solutions. Being a vendor for systems to the electrical and automotive industry as well as for the ranges wind energy, pharmaceutical and medical sectors, the HEDRICH Group provides made-to-order and innovative technical products as well as services throughout their whole portfolio. As a specialist for the processing of insulating media under vacuum to optimize dielectric properties in the range of silicone, cast resin as well as oil/paper insulation equipment, the company is active in more than 30 countries and has more than 230 employees.
